

PRESS RELEASE

Iron & Oak Adds Skid Steer Log Splitter to Line

Up to 24 Tons of Splitting Force Depending on Skid's Hydraulic Pressure

Rogers, MN (July 2019) - Iron & Oak now offers the SMH2419 Skid Steer Log Splitter. This unit is popular for those who wish to bring the log splitter to their pile instead of bringing the pile to their log splitter.

The durable, long-lasting, industrial-grade I-beam allows the unit to be rated for fully loaded, continuous use. The large 12" heavy-duty wedge can take on even the largest of logs. This horizontal log splitter can split logs up to 25" long and 24" in diameter.

The 24 Ton* Skid Steer Log Splitter is operated 100% from the cab of your skid steer. The Splitter can be quickly and securely attached using the standard skid steer plate. Unit comes standard with 9' nylon wrap hoses that protect them from wear and tear and add protection from harsh weather elements. ****The maximum splitting force of 24 tons and pressure of 3,500 PSI is dependent on the Skid Steer.***

About Iron & Oak

Located in Minnesota, Iron & Oak manufactures and distributes a full line of log splitters. Since 1982, their commercial quality log splitters have been rated among the top in their industry for their performance, ease of use, and reliability.
