## Iron & Oak to Debut Three New Splitters

*24 and 30 Ton Splitters to Appear at The Rental Show*

**Rogers, Minn. (February 2018)** – Iron & Oak will be debuting three new vertical/horizontal log splitters at the American Rental Association's *The Rental Show* in New Orleans, La., February 19-21.

These new 24 and 30 ton splitters are powered by Honda engines and feature an innovative Auto Latch System that locks the beam into the horizontal position for safe towing. An enhanced handle assists with transitioning the unit between the horizontal and vertical operating positions. A heavy-duty wedge boasts five bolts per side and pairs with a standard log dislodger for extra durability. The hydraulic system is protected by a 4-stage filtration system which removes metal particles and other micro particles that can contaminate and damage the splitter. The three new models also feature a larger jack wheel than previous models making it easier to move the unit on grass. A heavy-duty log cradle and fenders are standard. A torsion axle 30 ton splitter is available for smoother towing.

### **About Iron & Oak**

Located in Minnesota, Iron & Oak manufactures and distributes a full line of log splitters. Since 1982, their commercial quality log splitters have been rated among the top in their industry for their performance, ease of use and reliability.
